LOADING A WEB PAGE

This recipe shows how to load a web page in a `UIWebView` control.

Sample Code:

[Loading a Web Page.zip]

Recipe

To show a web page:

1. Create a `UIWebView` and add it to a view:

    ```
    webView = new UIWebView (View.Bounds);
    View.AddSubview(webView);
    ```

2. Load a URL using `NSUrl` and `NSUrlRequest` classes:

    ```
    string url = "http://xamarin.com";
    webView.LoadRequest(new NSUrlRequest(new NSUrl(url)));
    ```

Additional Information

By default the web page will open at its normal resolution. To scale it down so that the entire page width is visible set the `ScalesPagesToFit` property.

```
webView.ScalesPageToFit = true;
```

Default behaviour   ScalesPagesToFit=true;
